

Ash Pond Closure Solutions

Environmental - Application

Fast, Effective Dewatering Improved Strength & Compaction Cost Effective Vs. Alternative Drying Methods

Mintek is your one-stop shop for  **Calciment**,
Lime, Bed Ash, Fly Ash, Cement, & More!

- Save time and money on your next ash pond closure
- Heavy metal waste fixation by adjusting the pH rendering metals insoluble
- Fast dewatering & solidification for increased productivity
- Increased stability for improved handling characteristics
- Effective dewatering to save money on transport & disposal costs
- Optimum drying to meet landfill requirements for paint filter, strength, etc.
- Calciment can be used in specialty blends for site specific requirements
- Available in bulk truckloads and super sacks to meet most jobsite requirements

When your Ash Pond Closure Requires a Drying Reagent

Mintek can Help.

Field-proven, cost effective reagents offer quick moisture reduction, pH level adjustment and improved geotechnical properties including strength and compaction. Fast water elimination allows you to close your ash pond faster, decreasing project time and cost.

Over two decades of experience, and hundreds of successful environmental dewatering projects completed prove Mintek is the leading solution provider for solidification & dewatering. We understand the application demands of the environmental industry & have structured our business to meet those needs offering technical support, multiple packaging & shipping options, logistics management and on time delivery.

“Within minutes, Calciment began to dewater the ash leaving a solid material that was more stable and easier to handle.”

-Tripp Winfree, Project Coordinator - Envirocon
